Profile

Working as full stack web developer since 2009, I have built dozens of websites and web applications for small/medium businesses using modern tools and technologies, which I have currently set to Laravel and AngularJS. Looking for long-term collaborations to further develop my skill-set, with a preference for remote work.

Experiences

WEB DEVELOPER - CENTRO MEDICO CHIRURGICO VETERINARIO S.R.L. – 2008 - PRESENT

Managing and migrating an old Filemaker hospital management software to a web based application, to obtain needed data consistency and reliability. Used tools include PHP, Laravel, AngularJS, PostgreSQL and Redis. Other tasks include creation and management of the company website, which offers advanced features like medical references submission, online appointments and trainees sign-up.

WEB DEVELOPER - THEMIX ITALIA S.R.L. – 2013 - PRESENT

I'm responsible for a hosted lab reports publishing system to whom a wide array of Italian laboratories rely to provide online retrieval to their customers. The project follows strict security standards and uses encryption to make sure that no one, except the owner, can access the information.

FREELANCE WEB DEVELOPER AND CONSULTANT – 2009 - PRESENT

As a freelance I've managed web projects for many companies, from simple static pages, to CMS based websites (Drupal 6-7 and Wordpress), to more complex custom coded websites. I worked as the only interface with the client or integrated in other teams, where I usually cared for the most technical parts. Always outsourced graphic design and SEO to third parties.

WEB DEVELOPER - BRAIN REFRESH LAB S.R.L. – 2010 - PRESENT

My role consists in the creation and management of internal training websites for medium/large companies (usually in the finance/banking industry), which share a single codebase built on Laravel, flexible enough to support lots of per client customizations. Among the clients: Volkswagen Financial Services, Aviva, Sara Assicurazioni, BPER, Helvetia, Sky Italia.

WEB DEVELOPER - HOTEL ROCCE ROSSE – 2009 - 2011

I was responsible for the creation and development of the company website, third party APIs and booking engine integration, internal software management.

Instruction

Liceo Scientifico Innocenzo XI – Diploma, 2005

Key Skills

Coding	PHP, Javascript, Golang
Frameworks	Laravel, AngularJS, jQuery
Storage	MySQL, PostgreSQL, Redis, Elasticsearch
Testing	PHPUnit, PHPSpec
Dev/deployment	Git, Vagrant, Ansible
